

EPA has information about the addition of the CFAC site to the National Priorities List to share with the community

- The CFAC site was proposed by EPA for addition to the National Priorities List (NPL) in March, 2015.
- The proposed listing was followed by a 60-day public comment period.
- EPA headquarters has reviewed and prepared a response to the public comments.

Updates to the NPL typically take place twice a year – in the spring (March) and the fall (October). A public meeting will be held for the community once a decision is made.

There is a potential that EPA could add the site to the NPL in March of this year; ***however, EPA has not made a final decision on the timing for finalizing the listing.***

The AOC for the RI/FS is now in place (signed November 30, 2015) - EPA will still continue to work with CFAC and the community.

Glencore has hired Roux as their Engineering firm and will work on Phase one of the RI/FS is planned to begin this spring (April to May time frame based on weather conditions) – and any decisions about the timing of the final listing will not change those plans.

The RI/FS schedule indicates the final RI due 1<sup>st</sup> quarter 2020 and final FS 1<sup>st</sup> quarter 2021.

We want to hear from the community about any information they may want to share about the timing of the listing.

~~We have discussed the Superfund Alternative Approach and that is still being considered by EPA, but it is a fairly new approach for Region 8 and approval is not guaranteed.~~

~~If EPA decides to list the site in March, we will hold a public meeting to let the community know and answer any questions.~~
